(54) Title: METHOD OF CONTROLLING A COMMUNICATION CONTROL ENTITY

(57) Abstract: A method of controlling a communication control entity in a mobile communication network and a corresponding communication control entity are described. The communication control entity is a part of a pool of communication control entities. In accordance of the invention, when acting as a primary communication control entity and receiving a request for adding a new secondary communication control entity to the overall control procedure, the communication control entity of the invention is arranged to determine whether the requested new secondary communication control entity is a part of the pool or not. If it is a part of the pool, then the primary communication control entity established a direct connection to the access part. The requested communication control entity is not added to the control procedure as a relay.
